

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1.	Which of the following methods do we use to find the best fit line for data in Linear Regression?
	A) Least Square Error B) Maximum Likelihood
	C) Logarithmic Loss D) Both A and B
	,
	Answer: A) Least Square Error
2.	Which of the following statement is true about outliers in linear regression? A) Linear regression is sensitive to outliers B) linear regression is not sensitive to outliers C) Can't say D) none of these
	Answer: A) Linear regression is sensitive to outliers.
2	A line follo from left to right if a plane is
3.	A line falls from left to right if a slope is? A) Positive B) Negative
	C) Zero D) Undefined
	Annual Di Manakina
	Answer: B) Negative.
4.	Which of the following will have symmetric relation between dependent variable and independent variable? A) Regression B) Correlation C) Both of them D) None of these
	Answer: C) Both of them.
5.	Which of the following is the reason for over fitting condition? A) High bias and high variance B) Low bias and low variance C) Low bias and high variance D) none of these
	Answer: D) None of these
6.	If output involves label, then that model is called as: A) Descriptive model B) Predictive modal C) Reinforcement learning D) All of the above
	Answer: B) Predictive model.
7.	Lasso and Ridge regression techniques belong to? A) Cross validation B) Removing outliers C) SMOTE D) Regularization
	Answer: D) Regularization.
8.	To overcome with imbalance dataset which technique can be used? A) Cross validation B) Regularization C) Kernel D) SMOTE

MACHINE LEARNING

. Answer: A) Cross Validation

- 9. The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for binaryclassification problems. It uses ______to make graph?
 - A) TPR and FPR B) Sensit
 - B) Sensitivity and precision
 - C) Sensitivity and Specificity D) Recall and precision

Answer: B) Sensitivity and precision

- 10. In AUC Receiver Operator Characteristic (AUCROC) curve for the better model area under the curve should be less.
 - A) True B) False

Answer: A) True

- 11. Pick the feature extraction from below:
 - A) Construction bag of words from a email
 - B) Apply PCA to project high dimensional data
 - C) Removing stop words
 - D) Forward selection

Answer: B) Apply PCA to project high dimensional data.

In Q12, more than one options are correct, choose all the correct options:

- 12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?
- A) We don't have to choose the learning rate.
- B) It becomes slow when number of features is very large.
- C) We need to iterate.
- D) It does not make use of dependent variable.

Answer: D) It does not make use of dependent variable.

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Answer: Regularization is a set of methods for reducing overfitting in machine learning models. Typically, regularization trades a marginal decrease in training accuracy for an increase in generalizability. Regularization encompasses a range of techniques to correct for overfitting in machine learning models.

14. Which particular algorithms are used for regularization? **Answer: There are three main regularization techniques, namely:**Ridge Regression (L2 Norm)

Lasso (L1 Norm)

Dropout.

15. Explain the term error present in linear regression equation?

Answer: An error term represents the margin of error within a statistical model; it refers to the sum of the deviations within the regression line, which provides an explanation for the difference between the theoretical value of the model and the actual observed results.
